 49. ~~Const~~

2. `let studentName = "Arun";`

A Variable is a named storage location used to store data in javascript.

3. Variable declaration means creating a Variable by giving it a name.

`let studentName;`

Hence, Student Name is declared.

4. Initialization means give a Value to a Variable when it is created

`let age = 20;`

age is initialized with the Value 20.

5. The assignment operator is `=`. It is used to assign a Value to a Variable

`let age;`

`age = 20;`

`=` assigns 20 to age

6. `Var`, `let`, and `const` are Keywords used to declare Variable in javascript.

`Var name = "Arun";`

`let age = 20;`

`const country = "India";`

7. i) Var - Can be redeclared and reassigned.

ii) let - Cannot be redeclared in the same scope, but can be reassigned.

iii) Const - Cannot be redeclared or reassigned after initialization.

8.

```
Var age = 20;  
age = 21;
```

```
let score = 50;
```

```
score = 60;
```

```
const pi = 3.14;
```

8.

(ECMAScript 2015) 2015 is a major version of JavaScript that introduced many new features including let, const, arrow function, classes, template literals, and more.

9.

A JavaScript Engine is a program that reads, processes, and executes JS code.

- VS

- SpiderMonkey.

- JavaScriptCore.

10.

VS is a JavaScript engine developed by Google. It is written in C++ and is used by Google Chrome and Node.js to execute JavaScript code.
